

Check sheet for creating "My Timeline"

Fill out the following check sheet before creating your "My Timeline".
Also refer to your "My Disaster Prevention Map" for each "check" item.

check1: Check the risk of your home! [For details, see P6 to 52]

Is the place where you live

- ① Within the expected flood areas with conditions such as collapsing houses? Yes⇒See check2 No
- ② within the landslide danger zone? Yes⇒See check2 No
- ③ within the inundation risk area? Yes⇒See check2 No

If the answer to all of these are "No", evacuation, etc., is not specifically required under the current predictions. However, if you live in an area that is at a lower altitude than that of the surrounding area or near a cliff, evacuate as necessary by referring to the evacuation information issued by Ibaraki City.

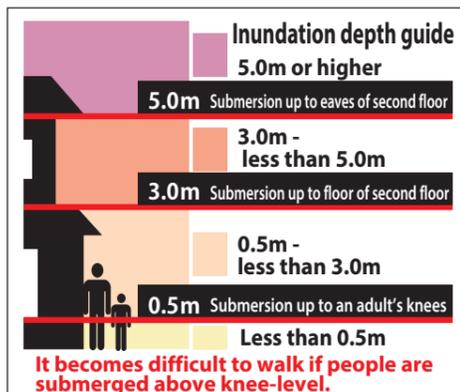

What is the depth of inundation?

If Ai River, etc., overflows from _____ m or more to less than _____ m
[For details, see P14 to 32]

If Nyoze River overflows from _____ m or more to less than _____ m
[For details, see P36]

If Yodo River overflows from _____ m or more to less than _____ m
[For details, see P38 to 39]

If sewage, etc., overflows from _____ m or more to less than _____ m
[For details, see P42 to 50]

check2: Check the required evacuation measures!

Which evacuation measures do you need to take?

- You live in a building where you can evacuate to a place located higher than the expected depth of inundation and you are prepared such as with stockpiled food for the event of a disaster.

⇒ **Ensure indoor safety**
Rather than evacuation, ensure safety indoors and try to collect information. If you want to consider evacuation, see check3

- You live in the following areas that require early evacuation.
 - You live in a flood risk area such as house collapse and landslide danger zones.
 - You live in a place which is lower than the expected inundation depth.
 - You live in an area with long inundation duration.

⇒ **Evacuate to evacuation shelters, relatives or acquaintances' homes, etc.**
To check3

check3: Check the situation of your household!

- ① Are there any family members (elderly/disabled, infants, etc.) who need help in case of evacuation?
 No Yes⇒Know the time required to evacuate and accelerate the timing of evacuation.
- ② Is there anyone who needs daily medications?
 No Yes⇒When evacuating, don't forget to bring emergency bags.
- ③ Do you have a car?
 No Yes⇒Decide beforehand if you need to move your car.
*Depending on the situation, evacuation by car can be dangerous.

check4: Check the timing of evacuation! [For details, see P58 to 63]

When will you start evacuation?

- If there are people who need help in evacuation ⇒Start evacuation when Alert level 3 is issued
 - If there is no hindrance in travel ⇒Start evacuation when Alert level 4 is issued
- *Evacuation at Alert level 5 is dangerous. Always evacuate when Alert level 4 or below is issued.

check5: Check the evacuation destination! [For details, see P64 to 67]

- ① Decide the evacuation destination.
Evacuate to a destination where the risk of inundation is low. In addition to the evacuation shelters established by Ibaraki City, decide as many evacuation shelters as possible, such as homes of relatives and acquaintances, in advance.
- ② Consider a safe route to the evacuation destination.
Avoid dangerous areas (underground passages, etc.) that may be inundated or channels where there is a risk of falling, and consider as safe a route as possible.
- ③ Get an idea of the time required to travel.
Once you have decided the route to the evacuation destination, actually walk or measure the distance on the map to get a rough idea of the travel time.
(*Time to walk 500 m ... Adults: Approximately 6 to 8 minutes, Elderly: Approximately 10 minutes)

Target Area for Evacuation Information Issuance	Evacuation destination name	Travel time	Notes (Precautions on the travel route, etc.)
